quality control

YOUR QUALITY UNDER CONTROL

The Textile QC Expert in Asia

AQM is a quality inspection company created in 2005 to provide inspection services in the textile industry.

As an organization independent from buying agencies, trading companies and production units, AQM provides business solutions for the safety of your imports. AQM offers solutions suitable to each situation in order to detect as soon as possible the risks without slowing down the flow of goods and therefore reduce the costs related to quality problems on delivery. AQM services give you an evaluation of the quality of the infrastructure or products and allow you to identify any non-conformity between the reality of the product and its specifications.

AQM relies on his own offices located in strategic productive areas (China, India, Bangladesh, and Turkey). In this way, the transmission of information is optimal and the customer quality requirements are entirely assimilated by our teams. AQM office managers are all expatriates from their country of origin. Trained in Europe to understand customer requirements and brand image, they supervise our teams specialized by area of activity and customer. They ensure direct and permanent connection with their customers.

Avoid the quality problem on delivery

Whatever the production stage is, adapted solutions allow you to detect quality problems before it is too late.

Know the manufacturing conditions of your products

Our experts will provide you all the information necessary to assess whether those conditions satisfy your **technical, quality, social and environmental criteria.**

**For your Textile inspections,
rely upon a specialist !**

✓ TEXTILE SPECIALIST

Starting at \$290 USD all inclusive in Asia

Improve the relationship with your suppliers

Thanks to a constant presence on your behalf and an early and objective detection of the quality non-conformities, most of the **conflicts are settled before they even take place.**

Book your quality control within 48 hours.

Receive your report on the same day of the inspection.

24/24 – 7/7 Hotline for any issue regarding inspections

OUR SERVICES

↳ FRI = Final Random Inspection

The end-of-line inspection ensures conformity with the product specifications and quality requirements before shipment. This control takes place when 100% of the goods is produced (80% packed). A random selection of pieces from the order is selected to ensure a representative sampling. FRI helps minimize the risk to import non-conforming products.

↳ DUPRO = During Production Inspection

This control takes place during the manufacturing process. This type of inspection gives the opportunity to take corrective actions to rectify non-conformities on time and check the production status. DUPRO is carried out when 20-30% of the production is complete.

↳ Factory Audit

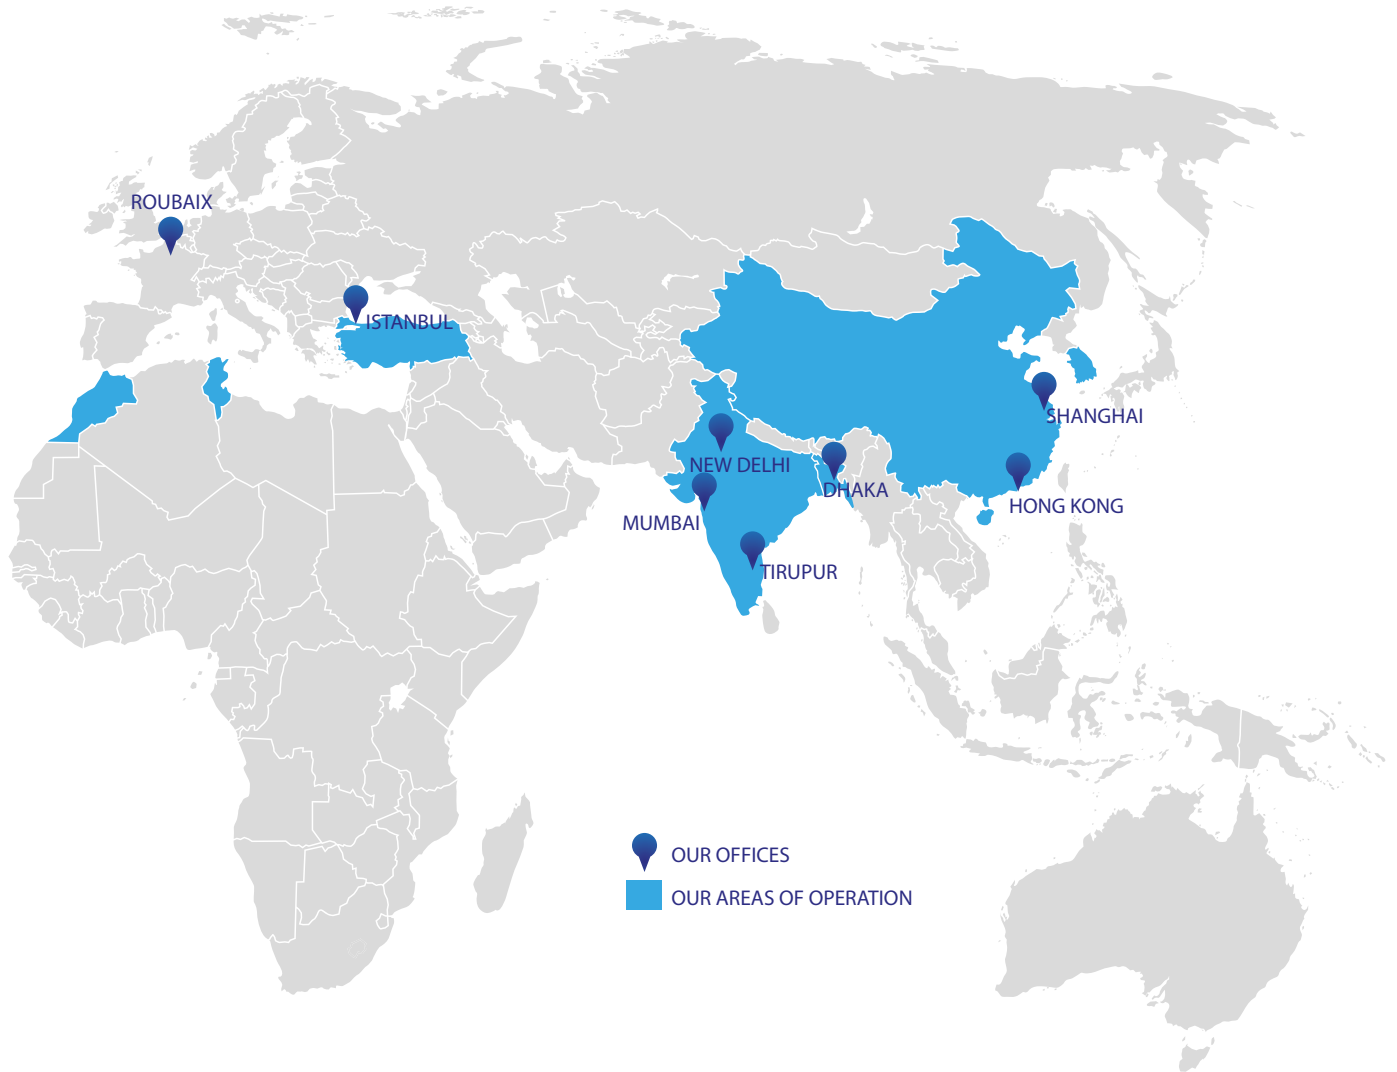

The audit has three objectives: evaluate the production capacity of the supplier, evaluate quality management system and its efficiency and estimate the supplier's capability to work with your company.

A qualified auditor is going to the factory for one or several days (depending on the size and the numbers of employees) and draws a detailed picture of the infrastructure and quality management system (based on ISO9000 standard).

↳ Quality Platform

The quality platforms are projects implemented for those customers willing to inspect all their orders outside of factories. Platforms are generally situated inside a logistic warehouse, close to harbors or airports.

A quality platform represents a particularly suitable solution for the textile industry: customers can save up to one week in their supply chain management.
